

# Bliss

Diya Jawalapersad, Melvin Lockx, Li Hong Chen

**Why:** Our one and only goal is preserving natural eternity, humanity has far too long been making actions without thinking of the consequences, our goal is bringing it back.

**How:** We're fighting deforestation, biomass, animal preservation, Overpopulation

**What:** By planting trees and creating artificial thriving ecosystems involving modern primitive cities (named ecocities), and rare species. Our funds will be by charity and by providing housing and work to those who need it.

## SDG's:

- Species equality  
By having it be our main goal and setting strict consequences to violation of rules.
- Housing for all  
By creating ecocities and providing work.
- Permanent preservation  
By creating a thriving economy inside of the ecosystem that will not thrive without said ecosystem we built.
